

Compared to ChatGPT, my own creativity shows as everything is strategically in place via exact coordinates of X, Y, and Z. An example of this can easily be seen in the visuals of both colorization as well as placement of each shape. AI truly did a subpar job of replicating my work. It honestly looked more abstract than normal due to the fact that shapes were tightly bunched. For instance, red circles were touching green squares. In conclusion, the entire project was a super fun experience to see what AI produces versus authentic work completed by a human.
