

The AI image that I incorporated into my code was a very interesting experience. I initially started out by asking ChatGPT and CoPilot to create an image. However, both platforms didn't understand that I wanted the file saved as a jpg. Therefore, I used Google's Gemini to create an AI generated image of a sunset as they are the only platform that automatically produces jpg files. As for the result of the image, I was truly shocked at the final results. I simply asked for a sunset photo and it sketched detailed imagery of a sun setting over a very huge lavender field. Overall, I had a very fun time with this experience.
